Distance-thresholded nearest-neighbor channel mapping

$$d_{ij} = d\left(e_j^{\text{src}}, e_i^{\text{tgt}}\right), \qquad j^*(i) = \underset{j \in \{1,\dots,C\}}{\arg\min}\ d_{ij}, \qquad z'_i = \begin{cases} z_{j^*(i)}, & \text{if } d_{ij^*(i)} \le r, \\ 0, & \text{otherwise.} \end{cases}$$

e: electrode position d: spatial distance r: distance threshold z: channel signal

Source electrode
Within radius, not selected
Outside radius
